SANTORINI AI

SINCE 2025

COMPANY PROFILE

Software engineering and AI systems you can trust.

A South African practice building bespoke software, production AI, and Rokkit, our risk and security intelligence platform.

Gordon's Bay, Western Cape · santoriniai.co.za · rokkitai.co.za · October 2026

ABOUT US

Who we are

Santorini AI (Pty) Ltd is a founder-led software engineering and AI consulting practice, established in 2025 and based in Gordon's Bay, Western Cape. We partner with organisations to design and build bespoke software and production-grade AI, on a senior, hands-on basis.

The practice is led by **Santhirin Pillay**, Founder and Managing Director, whose background runs through payment gateways, transaction switching and applied AI. That lineage shapes how we build: systems that are explainable, defensible, and safe to put in front of a regulator, an auditor or a customer.

WHAT WE DO

Capabilities

Bespoke software engineering

Full-stack systems, data infrastructure and integrations, delivered by senior engineers.

AI systems and enablement

In-app assistants, retrieval and grounding, LLM integration, built to be explainable.

Fraud, anomaly and risk detection

Real-time scoring on transaction and event streams, with the reasons attached.

Risk intelligence and due diligence

Entity and counterparty risk, verification and screening, each flag citing its source.

Authorised security assessment

Known-CVE and OWASP identification for your own assets, under explicit authorisation.

Platform modernization

Re-platforming and modernising legacy systems and front ends onto modern, maintainable stacks.

Managed operations

Hosting, monitoring, tuning and support, run as an ongoing managed service.

Advisory and delivery

Architecture, AI strategy and embedded delivery alongside your team.

OUR PLATFORM

Rokkit: risk and security intelligence

Rokkit is our platform for risk and security intelligence: one system that brings fraud detection, entity risk and security testing together, with every decision explainable. It runs in shadow next to your stack, a person always makes the final call, and it deploys in our cloud or your own environment, POPIA-aligned.

Detect

Real-time fraud, anomaly and risk detection on transaction streams, blended into one explainable score.

Intelligence

Entity and counterparty risk: due diligence, verification and screening, watchlist, PEP and adverse media.

AppSec

Authorised vulnerability assessment, CVE and OWASP, reported for remediation.

In-app assistant

A context-aware assistant that explains any decision and guides your team, grounded and cited.

HOW WE WORK

Why Santorini AI

- **Explainable and defensible by design.** Every decision shows the rules that fired, the signals behind it and the reason.
- **Shadow-first, low-risk adoption.** We prove performance on your data before anything influences a live outcome.
- **Your data stays with you.** Deploy in your own environment, tenant-isolated, audited, POPIA-aligned.
- **Configuration, not code.** New data sources and rules are config, so onboarding is fast.
- **Senior, founder-led delivery.** You work with the people who build the system, not a layer removed.

CASE STUDY

AlexonTech

Santorini AI partnered with **AlexonTech (Pty) Ltd** as a software engineering and AI delivery partner, under a formal confidentiality and non-circumvention agreement. Working as an embedded partner alongside AlexonTech's team, Santorini AI contributed senior engineering and AI capability to the engagement.

Engagement at a glance

- Role: software engineering and AI delivery partner
- Scope: senior software engineering and applied AI, delivered as an embedded partner
- Basis: formal agreement, confidentiality and non-circumvention

Published with AlexonTech's permission. Details limited by the confidentiality agreement between the parties.

IN THEIR WORDS

Client testimonial

> *"We brought Santorini AI in for serious software and AI work, and they delivered. What stood out was how carefully they build: the systems are explainable, nothing is a black box, and Santhirin is hands-on from the first conversation to delivery. They worked as an extension of our team and set a new bar for what we expect from an AI partner."*
